

Game Engineering and Simulation Technology

May 16, 2015

Letter of Recommendation

Ms. Maria Hejlek

To whom it may concern:

As the academic director of the Master's degree program "Game Engineering and Simulation Technology" at the University of Applied Sciences Technikum Wien, Austria, I am writing to you in support of **Ms. Maria Hejlek**.

Ms. Hejlek has been my student for four years and she has shown academic aptitude and ambition above and beyond among her peers. She was in several of my classes, but most notably performed remarkably on "Development Project", our course for developing a video game in a team over the duration of two semesters. Ms. Hejlek chose to be Lead Game Designer for her project and the game ended up being extremely unique in concept and design, as well as complexity and attraction.

Before the "Development Project" course, Ms. Hejlek also achieved the highest grades in my other courses and always showed great ambition and promise. I followed her progress closely and was always interested in her work.

Socially, Ms. Hejlek was very appreciated by her peers and always had an open ear for anyone needing help. She participated in many social events and developed close friendships with many other students. When working in a team, she inspired and motivated her team members and resulting group projects were always very interesting and impressive.

Her curiosity and drive make her an exceptional person. Without reservation, I highly recommend her for any career choice she may want to pursue. Please do not hesitate to contact me providing you with any further information regarding Ms. Hejlek.

Best regards,
FH-Prof. Dipl.-Ing. (FH) Alexander Hofmann
